

Oral Cancer Early Detection: A Game-Changing Salivary DNA Test

Today, two-thirds of oral cancers are diagnosed in the late stages, contributing to a mortality rate that has not decreased in decades. SaliMarkTM OSCC is the early-detection solution.

SaliMark developed by PeriRx is a game-changing salivary DNA test for oral cancer available to dentists, oral surgeons and ENTs. SaliMark can detect oral cancer in stages 1 and 2, where it is most successfully treated.

Benefits to Your Practice

- Helps front-line practitioners make more informed, earlier referrals for biopsy of suspicious lesions.
- Can also be used in ENT office as a preliminary test to confirm risk before conducting a more invasive biopsy or initiating other follow up.
- Generates personalized information about a patient's oral cancer risk.
- Sample is easy to collect and can be quickly sent for analysis.
- SaliMark is billed under approved existing CDT dental and CPT medical codes.

ENTs and their referral networks now have a non-invasive oral cancer screening test. By educating dentists and PCPs on next generation tools, ENTs can help identify cancers earlier.

***The time is now.
The solution is SaliMark.***

SaliMark: Revolutionizing Oral Cancer Screening

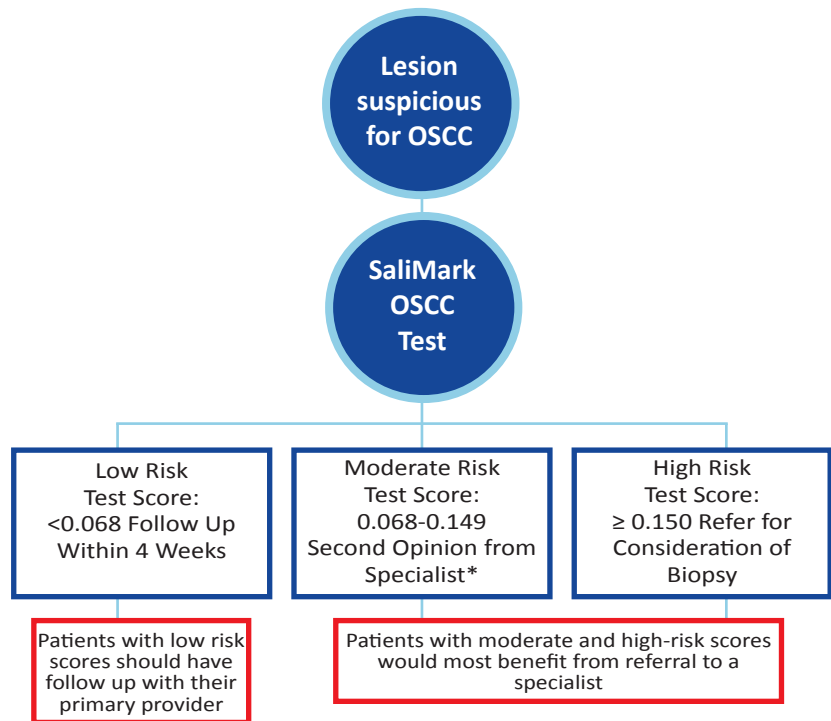

Ease of Use for Providers, Peace of Mind for Your Patients

A decade of clinical research validates SaliMark. More than 900 patients have participated in studies, including an independent National Cancer Institute validation. By educating dentists and PCPs on next-generation testing tools, ENTs can help them identify oral cancers earlier.

How it Works

- A dentist, hygienist or PCP collects a salivary sample that is sent to the lab, where it is examined for molecular DNA markers.
- Quantitative results can aid in identifying patients at increased risk and warrant further evaluation such as biopsy, which remains the gold standard for diagnosis.
- What the scores mean: Prospective blinded clinical trial test scores maximize sensitivity at 96% with nearly 99% negative predictive value in a high-risk population.
- SaliMark lab analysis patient fee can be submitted for reimbursement using existing medical CPT code 81599.

How to Use the SaliMark Test Score

* Specialist decision on biopsy and follow up to be based on quantitative test score, physical examination and risk factors in medical history (smoking, alcohol consumption, age, gender and ethnicity)
