

Oral Cancer Early Detection: A Game-Changing Salivary DNA Test

Today, two-thirds of oral cancers are diagnosed in the late stages, contributing to a mortality rate that has not decreased in decades. As leaders and experts in oral cancer, surgeons play a key role in educating dentists about next-generation tools. SaliMarkTM OSCC is the early-detection solution.

SaliMark, developed by PeriRx, is a game-changing salivary DNA test for determining oral cancer risk.

Benefits to Your Practice

- Yields personalized information about a patient's oral cancer risk, reducing uncertainty in dentist referrals.
- Can detect oral cancer in stages 1 and 2, where it is most successfully treatable.
- Sample is easy to collect and can be quickly sent for analysis.
- Use as a preliminary test to confirm risk before conducting a more invasive biopsy or follow up treatment.
- SaliMark is billed under approved existing CDT dental and CPT medical codes.

You and your referring dentists now have a noninvasive oral cancer screening test that can reduce the guesswork in oral cancer risk assessment through the entire referral chain.

The time is now.

The solution is SaliMark.

SaliMark: Revolutionizing Oral Cancer Screening

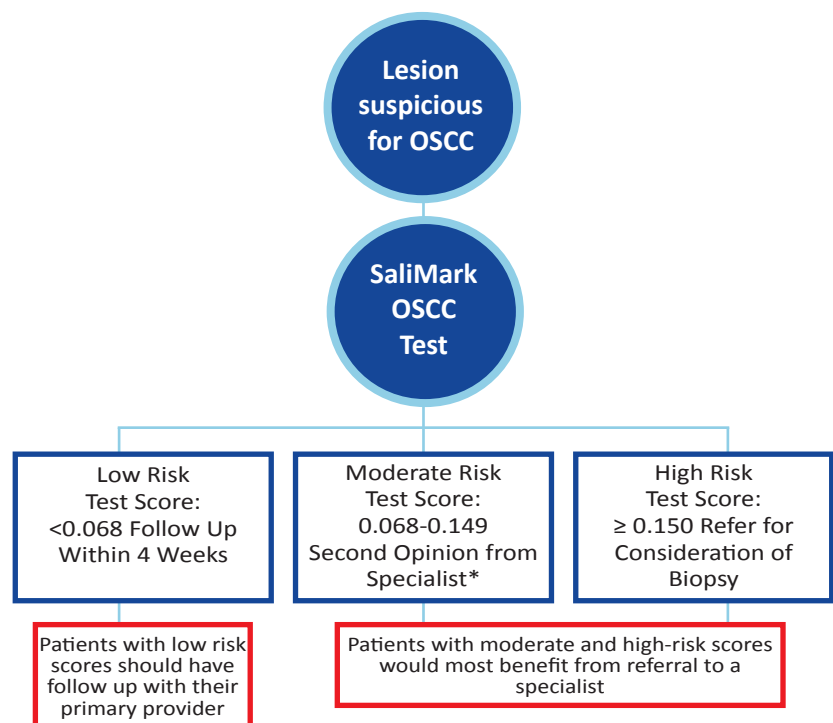

Precision Medicine For You, Peace of Mind for Your Patients

A decade of clinical research validates SaliMark. More than 900 patients have participated in studies so far, including an independent National Cancer Institute validation.

How it Works

- Dentists, hygienists or oral surgeons administer this simple salivary test to supplement visual oral screening exams.
- Practitioners send samples to the lab via pre-paid overnight mailer; test results made available electronically to the clinician within 72 hours.
- Quantitative results provided by SaliMark can aid in identifying those patients at increased risk that warrant further evaluation such as biopsy, which remains the gold standard for diagnosis.
- SaliMark lab analysis patient fee can be submitted for reimbursement using existing medical CPT code 81599.

How to Use the SaliMark Test Score

* Specialist decision on biopsy and follow up to be based on quantitative test score, physical examination and risk factors in medical history (smoking, alcohol consumption, age, gender and ethnicity)
